-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on March 10, 2005 (re-submission of RCE filed 5/18/04) has been entered.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 36 and 45- 47 are rejected under 35 U.S.C. 102(e) as being anticipated by Fink (6,029,995)

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C.

102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37

Art Unit: 3616

CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Fink discloses an apparatus comprising: a container (40) storing inflation fluid (16) under pressure, said container having an outlet (46) through which inflation fluid flows from the container; a rupturable (48) closure member fixed (50) to said container and blocking flow of inflation fluid through said passage; a support (24) for said rupturable closure member defining a chamber (62) adjacent the rupturable closure member, said rupturable closure member having a first portion deformed (at 260; see Figure 1) into said chamber by the pressure of the inflation fluid (see also embodiment of Figure 9; column 7, lines 18-29) and a second ring-shaped portion (portion at weld 50) encircling the first portion outside of the chamber, the first and second portions having a substantially flat configuration (see Figure 2) prior to the inflation fluid being introduced into the container; and an initiator (14) which when actuated, ruptures the closure member (see column 6, lines 1-5). Regarding claim 47, as part of the rupture closure member is welded to the support member, part will inherently remain connected with the container.

***Allowable Subject Matter***

4. Claims 1, 3-10, 12-17, 23-35, and 37-44 are allowed.
